

Getting Started

Schedule a complimentary one hour demonstration to start things off.

Assessment Stage

- Commit to a UTL discussion with key staff and budget decision makers at your site. This includes a one-hour overview of UTL's power and capabilities under real conditions

Evaluation Stage

AIS will dedicate a single point of contact for your site along with an operational knowledge keeper, and a software engineer all at AIS's expense.

We will help you put together a small evaluation team at your site including:

- Operations manager
- Process safety manager
- IT representative

This process takes approximately a week. AIS evaluates your site's feeds including DCS and process historians, tank information, lab systems, handheld devices, and other critical data sources. You will learn how UTL improves operational-critical handoffs and real time operational monitoring. We have yet to find a site that has not benefited from our free evaluation.

Implementation Stage

If UTL makes sense at your site and you are ready to move forward, implementation is simple. AIS will work with your IT department to tie in to your critical data. We will train your key point-of-contact to identify and create the modules that work best for your business needs as well as train your trainer. Since UTL is easy to use, most operator training can be done in about 15 minutes during a lunch meeting.

UTL can be fully operational within a month, providing you with instant access to accurate, timely, and reliable information. Time and again, AIS has proven to lower our clients' expenses and increase revenue. You will also benefit from all future upgrades, ensuring your site will remain on the cutting edge of advanced operations monitoring technology well into the future.

"A single, easy-to-use software package, putting vital data at your fingertips – no need to buy pieces from multiple vendors. UTL does it all. Plus, the AIS customer support team is terrific to work with! Whenever we have a question, they are right there for us. Great personal touch."
