

Universal Tag Locator

Return on Investment with UTL

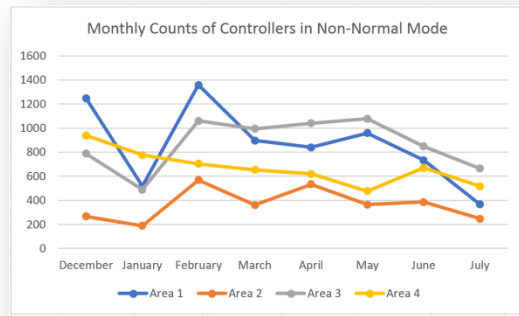

Measurable Improvements

The Universal Tag Locator (UTL) from AIS is a world-class operations management and worker communication platform, developed for and by refiners. It significantly improves safety, productivity, and the bottom line. The financial benefit received from UTL can be demonstrated through the return on investment (ROI) experienced by actual UTL users. Measurable improvements in key performance metrics translate into increased revenue and are typically realized in the first six-to-nine months after UTL goes live.

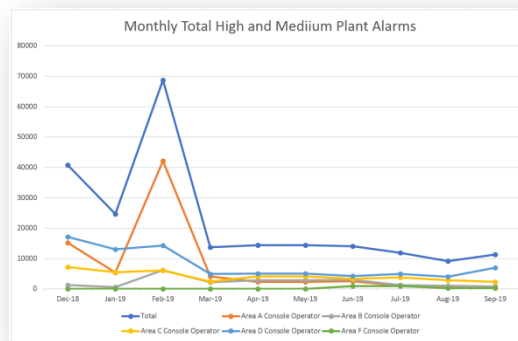

One Texas oil refinery exceeded its 2-year, 50% IRR capital expense requirement for <\$5mm projects. Another U.S. gulf coast refiner doubled their light product production and realized a \$2 per barrel margin improvement over the first six months after installing UTL.

Another refinery saw an immediate 17,130 barrels per day (29%) increase in throughput in the first nine months of operation.

It also realized a 45% reduction in off-normal mode counts in the first seven months.

It also saw a significant 72% reduction in monthly high and medium alarms rates.

Imagine what UTL can do for you, your facility, and your bottom line.

Software. Systems. Solutions.
